

9-29-76

- remove the MeOH SN from the sample place it in 15 ml Cent tube.
- dry solids with N_2
- add to solids - ~ 5 ml H_2O and stir for several hours - heavy suspension resulted with still a lot of solid material
- centrifuge solids with 40 rotor 10K 10min

9-30-76

Observation - there are a lot of peaks in the region of ^{Aug} bases - possibly these peaks represent di, tri nucleotides, etc.
